

Customizing the articles component on the homepage

Customizations

You can place an **Articles** component to display certain articles from your help center on the homepage - FAQs, Trending/Popular, Latest, Recently Updated.

To customize this section, go to **Settings** -> **Customize**:

In the Template editor that opens, enter the Homepage section:

Trending Articles

Clicking on the **Articles** component will open the settings for that element below. There, you can configure the sections displayed in the Articles listing. You have an option between four types of sections - FAQs, Trending/Popular, Latest, Recently Updated.

Since the articles listing component supports only 2 columns, two is the maximum number of sections you can select. Once you reach the maximum, you will see a warning message like this one:

Add a Section:

You already have the maximum number of sections. Please, remove one first, if you'd like to add another.

and the control to add more sections will disappear.

Change the titles of the sections

You can adjust the titles of each section or provide translation in the various language, your help center supports. To do this, click on the small **Edit** icon right next to the name of the section. When an inline input appears, type your new section title or translate it and then press **Enter** to confirm the change.

Sections

Add a Section:

 You already have the maximum number of sections. Please, remove one first, if you'd like to add another.

Current Sections

- Trending Articles  
- FAQs  

If you do not to press **Enter** at the end, the changes to the title will not get applied.
