

# Reverting an article to previous version

## Build your help center

In [HelpCenter.io](#), it's easy to revert an article to a previous version if you or somebody else on your team have made changes that you'd like to undo. Here's how you can do this:

1. **Access the Article Editor:** Navigate to the help center dashboard and open the article editor for the article you wish to revert.
2. **Find the Revisions Link:** In the editor toolbar, you'll see a link labeled 'Revisions.' Click on this to access the revision history of your article.

3. **Revert to a Previous Version:** In the revision history, you'll see a list of all the changes made to the article. Locate the specific change you'd like to revert. Next to this change, you'll see a circular arrow icon - click on this to undo that particular change.
